### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Alun L. Palmer (Reg. No. 47,838) on 2/1/07 to overcome a 112-2<sup>nd</sup> paragraph rejection to the claim by further clarifying the claim, and to correct minor grammar errors.

The application has been amended as follows:

In claim 11 lines 1-2, the term "A converter having a status indicator, the converter converting an RS232 connector to an RJ45 connector, the RS232 connector having signals of" has been deleted and replaced by --- An RJ45 converter for an RS232 connector, having a status indicator, the RS232 connector having signals of ---.

In claim 11, line 4, the term "the converter comprising:" has been deleted and replaced by --- the RJ45 converter comprising: ---.

In claim 11, line 13, the term "switch, when" has been deleted and replaced by --- switch, wherein when ---.

In claim 11, line 15, the word "having" has been deleted and replaced with --- outputs ---, and the word "connecting" has been deleted.

In claim 11, line 17, the term "switch, when" has been deleted and replaced by --- switch, wherein when ---.

In claim 11, line 19, the word "having" has been deleted and replaced with --- outputs ---, and the word "connecting" has been deleted.

***Allowable Subject Matter***

Claim 11 is allowed over the prior art of record.

The following is an examiner's statement of reasons for allowance:

With regards to claim 11, the prior art alone or in combination fail to teach or fairly suggest at least:

a driving unit, having

a first metal-oxide semiconductor (MOS) switch, wherein when the gate electrode of the first MOS switch receives a high voltage signal, the first MOS switch outputs a high voltage signal to the P pole of the second LED; and a second MOS switch, wherein when the gate electrode of the second MOS switch receives a high voltage signal, the second MOS switch outputs a high voltage signal to the P pole of the second LED; in combination with the rest of the elements of the claim.

The following is a discussion of prior art of record which fails to teach all the claimed limitations of the instant application:

US Patent Application Publication no. US 20020049877A1 to Lin teaches in Figure 5, an RJ45 adapter for an RS232 connector. However Lin fails to teach details of a driving unit nor the details of an RXD, CTS, DSR, RTS, and DTR signals within the RS 232 connector part, and also lacks a display unit comprised of LEDs.

US Patent 6,266,721 to Sheikh et al. teaches in Figure 3, element 104 being an interface board which acts as a RS232 to RJ45 converter. However, Sheikh et al. fails to teach the details of a driving unit nor the details of an RXD, CTS, DSR, RTS, and DTR signals within the RS 232 connector part, and also lacks a display unit comprised of LEDs.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the

issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
